New Product Launch !!!

Greetings!

Hot off the heels of the GT3, we bring you the IQA Nuclear Flask Wagon. It was built by Bombardier in Wakefield. Designed to carry nuclear flasks for use by the MOD. They ran with DRS locos, and there were two versions. this was the smaller of the two, with the larger being a well wagon.

This model will feature DCC operated cargo doors, this innovation we believe is the first of it's kind. We will have pre-fitted DCC decoder so no need of fitting it yourself. We also offer a DC version without all the mechanical equipment to open the doors, you can still open the doors, just manually. There will also be a removable Flask inside that you can lift out and hang from a crane or reach stacker.

We expect demand to be very high for this exciting new model, we are only producing 1500 models split between the two versions.

We offer two versions DCC £150.00 and DC £80.00, both plus shipping.

Delivery expected **2nd Qtr 2021**, subject to change.

PRE-ORDER NOW, to avoid disappointment.
